**Filing Date: 08-31-2001**  
**Attorney Docket No. 4020-001**

Examiner LY:

We have received the Interview Summary concerning our meeting on May 20, 2009. As requested, this letter details the substance of our interview, submitted within the one-month time period from the date of the interview. A formal written response to the last Office Action was previously submitted on April 23, 2009 via EFS-Web. The following paragraph summarizes the interview and confirms that an agreement was not yet reached:

We presented a demonstration to you and Examiner FLEURANTIN. We identified the differences between our invention and the applied prior art, distinguishing our diagrammatic representation from the Tran invention, specifically that our graphical component structure includes the component content. As stated in our recent Office Action response, our graphical and visual hierarchical presentation of the component structure and the component content is fundamentally different from the type of data communication in the Tran invention. According to our invention, each distinct component or subcomponent has its own diagrammatic representation and corresponding text-based information wherein the text-based information and the diagram components for each component or subcomponent of the technology or invention are automatically directly linked by being visually integrated with one another within the graphical component structure.

After our presentation, you suggested that you will re-consider the "visually integrated" aspect with text and diagram.

Thank you again for your time during the interview and your comments. We will await the results of the updated search.

Sincerely,

JiNan Glasgow, Reg. no. 42,585
